High-speed door vs. sectional door

Superior in every respect: EFA-SST® Essential

EFAFLEX
safe high-speed doors

Superior in performance, speed, and service life

With our economical EFA-SST® Essential high-speed spiral door, you can make the switch from conventional sectional doors to the price-performance winner from EFAFLEX.

ENERGY EFFICIENCY THAT PAYS OFF

The EFA-SST® Essential is the most economical solution for every building closure: Thanks to its outstanding insulation properties, it ensures constant temperatures inside the building. Together with the speed at which the door is opened and closed, the energy loss is kept at the lowest level. This protects your building from unwanted heat or cold air exchange and therefore reduces heating and cooling costs to a minimum!

DURABLE AND HEAVY-DUTY

Even in continuous use, the EFA-SST® Essential meets the highest expectations: Its innovative design makes the high-speed spiral door extremely stable, low-maintenance and weatherproof. It also withstands strong wind loads and can complete up to 100,000 load cycles every year – thanks to the efficient EFA-THERM® laths in all weather conditions, ranging from freezing cold to summer heat. EFAFLEX high-speed spiral doors are virtually indestructible and convince by their long service life – you can rely on them!

RELIABLE, FAST, AND COMPACT

Thanks to the compact design of the EFAFLEX spiral, the EFA-SST® Essential can be integrated into almost any building structure. The homogeneous door construction ensures a very good running performance combined with sufficiently high speed. In addition, the surfaces remain free of wear and scratches due to the contactless winding of the door leaf – it goes without saying that this also applies to the optionally installed sight laths.

Best in performance, speed, and service life! This means that the door meets the consistently high quality standards of EFAFLEX – at a particularly attractive purchase price.

AN INVESTMENT FROM WHICH YOU WILL DEFINITELY BENEFIT!

Advantages in direct comparison

EFA-SST® ESSENTIAL		Conventional sectional door
	SPEED	
Maximum opening and closing speeds up to 0.5 m/s	**Door leaf speed**	Speed up to 0.25 m/s
Spiral door technology for space-saving installation and contactless curtain winding	**Space requirement & wear**	Increased space requirement and wear due to door movement with deflexion technology
	SAFETY	
All-round safety due to closed case design	**Design**	Exposed door technology (cables and rollers) through open guide rail
Integrated safety light barrier protects against external manipulation	**Light barrier**	Exposed light barrier allows external access
Cable routing in the door cases for optimum protection	**Power supply to contact strip**	Spiral or energy chain are unprotected
	QUALITY	
Can be used sustainably thanks to a service life of up to 1 million cycles	**Service life**	Life expectancy only 0.1 million cycles
High-quality, continuous hinge chain of metal	**Hinges**	Individual hinges of plastic
Self-supporting case construction for easy assembly	**Case assembly**	Case assembly only possible with substructure
Optional spiral cover and motor cover	**Protection by covering**	No protective covers
Can be used variably thanks to optional outdoor installation	**Outdoor installation**	No outdoor installation
